## HOW DO YOU KNOW HOW WELL YOUR HOME IS PERFORMING?

A lower HERS means less energy used, which translates to lower utility bills. The Home Energy Rating System, or "HERS", Index estimates how your home performs compared to a house built to code. The HERS Index score is the energy-efficiency measurement standard for homes adopted by numerous municipalities and organizations, including ENERGY STAR and The Florida Green Building Coalition.

*Just as MPG is the measure of your car's efficiency, a HERS Index score is the energy-efficiency measurement standard for homes.*

The Kolter Homes HERS number is based on the Alondra model Lot 31 at Paloma, individual HERS ratings vary per home.
